Android Kultivator

Andriod Kultivator is an application that helps users protect their Android devices from security threats. The Software provides a user-friendly interface to perform various tasks such as retrieving system information, managing installed apps, checking CPU and RAM usage, and identifying dangerous permissions.

Overview

The Android Device Security Manager is a comprehensive solution that safeguards Android devices from various threats. It provides robust protection against unauthorized access, malware, and data breaches. The app is designed to be user-friendly, making it accessible to users of all technical backgrounds.

1 Get Basic Information About System

Retrieve essential details about the Android device, including the model, Android version, manufacturer, serial number, battery level, and more.

2 List Installed Apps

Display a list of all installed applications on the device.

3 Remove Installed App

Uninstall an application from the device by entering its package name.

4 Remove Default Apps of Company

Remove pre-installed company-specific apps by specifying their package names.

5 List All Permissions

List all permissions available on the device.

6 Get Permissions of Specific Application

Display the permissions used by a specific application by entering its package name.

7 Check What Uses System CPU

View the current CPU usage on the device.

8 Check What Uses System RAM

View the current RAM usage on the device.

9 Find Dangerous Permissions of All Applications

Identify applications that use sensitive permissions and display them with appropriate warnings.

The importance of the subject in different ways

Security and security mastery of the device

As a normal user or even an expert, you may not have much understanding of the behavior and performance of your default sysam software, or you may not be able to fully check the software licenses of your device. This software will give you the freedom of security.

More personalization

You have installed software to the system and you no longer need the default software. This tool can help you to optimize your system.

About KYGnus

KYGnus is a reputable software development company specializing in mobile security solutions. Our team of experts develops secure and user-friendly apps that protect users' devices and data. We are committed to delivering innovative solutions that meet the evolving security needs of our customers.
