suse

(openSUSE Package Manager)

Package manager in a different style for ease of working with
SUSE Linux

openSUSE

Basic Information

1 - Supported Distributions : "Leap" and "Tumbleweed"

2 - Update and Upgrade and dist upgrade Like ubuntu and Fedora

3 - Remove Unneed packages

4 - show Package Providers

5 - List Installed Apps

6 - Show repositories

7 - Show known apps

8 - Show Installation Manual

9 - Support for software that is not supported by the main package manager

10 - My own open source software has also been added to this script.

11 - Recommending documents to read about the requested software

12 - Install and Remove Packages 13 - Optimization of software search: It has been tried to reduce the sensitivity to upper and lowercase letters or having a dash or not having a dash in the search for software, etc., and if you know the name of the software, you can search or install it without any trouble. do.

Install

Source : <https://github.com/KooshaYeganeh/suse>

```
cd /tmp/ && wget
https://codeload.github.com/KooshaYeganeh/suse/zip/refs/heads/main
&& unzip suse-main.zip && cd suse-main && ./install && echo "suse
Package Manager Installed"
```

**!! Note : To use the script, go to /opt /script/ and run the script : ./suse
--list-app or Some More**

Basic Tutorial

suse Package Manager

--whereis : Each software shows in which repository it is located or which repositories provide this software.

Example :

```
./suse --whereis vlc
```

--howinstall : It shows the installation steps. It shows which steps you should go through to install the relevant software on your system.

Example :

```
./suse --howinstall vlc
```

--info : show information

```
./suse --info
```

man : suse man (Manual)

--install : use this command to install a software

Example :

```
./suse --install vscode
```

--remove : use this command to remove a software and try to remove dependencies

Example :

```
./suse --remove vlc
```

--remove --clean-unneeded : remove + clean_unneeded

Example :

```
./suse --remove vlc --remove-unnneeded
```

`--list-app` : List Installed apps

```
./suse --list-app
```

`--search-app` : Search in installed Apps

Example :

```
./suse --search-app vlc
```

`--clean-unnneed` : clean out all unnneeded autoinstalled dependencies

```
./suse --clean-unnneed
```

`--support-systems` : Which distributions does this package manager support

```
./suse --support-systems
```

`--list-repository` : list of repositories in system

```
./suse --list-repo
```

`--list --known` : Known Apps to suse

Example :

```
./suse --list --known security-tools
```

`--update` : update Packages

```
./suse --update
```

`--upgrade` : upgrade packages

```
./suse --upgrade
```

`--dist-upgrade` : Distribution Upgrade

```
./suse --dist-upgrade
```

`--document` : show recommended Documents Links

Example :

```
./suse --document clamav
```

Remove

```
sudo rm /usr/bin/suse
```
